Jarraff All-Terrain Tree Trimmer

Boom

The telescopic boom extends up to 75 feet with a 90-degree range of motion, providing unmatched cutting height. The non-conductive, high tensile fiberglass construction provides shock resistance and strength while limb deflectors protect the operator from sliding branches.

Controls

Two four-way joysticks allow the operator to maneuver and position the boom and saw blade effortlessly. Clearly and simply marked instruments provide the operator precise fingertip control to move in any desired direction.

Saw Blade

24-inch blade with carbide tips operates at 3,200 rpm. Two specifically designed blades come with each Jarraff. The Jarraff's saw blade is constructed for raw cutting power.

Seat

Fully adjustable operator seat provides comfort, vehicle controls easily accessed, ergonomically designed, equipped with a seat belt, certified to SAE standards.

Cab

ROPS, FOPS, OPS (not shown) and operator safety restraint certified.

JARRAFF
Industries, Inc.

Articulating Cab

The articulating cab offers a dynamic range of operation. It allows the operator to tilt 40 degrees in each direction with the boom during operation.

Operator seat while making all possible. The designed seat is also safety restraint that is standards.

Engine

A fuel-efficient Deutz diesel engine provides 97-horsepower. The four cylinder, turbo diesel engine positioning allows for easy access and service.

Hydraulics

Innovative hydraulic system powers boom positioning controls and extension controls continuously. Specially designed cover protects hydraulics from damage and debris.

Safety

The cab on the Jarraff All-Terrain Trimmer is in a class by itself offering superior engineering and industry exclusive features that help improve operator safety and productivity. After extensive testing, the Jarraff cab has received ROPS, FOPS, OPS and operator restraint certifications per all ISO and SAE standards. An industry first for self-contained all-terrain tree trimmers!

The high-performance cab is completely enclosed, protecting the operator from the elements. Full panel, tinted lexan windows prevent distortion and provide a clear view of operations. And a rear pop-out window adds another level of operator safety and protection. The cab is also specially designed to reduce noise and vibration providing the operator a safer and more comfortable working environment.

Service & Support

Every Jarraff comes with a comprehensive user-friendly manual that introduces users to the Jarraff, takes them through basic operational instructions and provides a detailed review of regular maintenance operations. Break out drawings and 3-D illustrations make part identification and service, simple and fast.

An accompanying DVD visually guides users through Jarraff safety information, maintenance procedures and operational instructions for both track and wheeled model units. Plus, the Jarraff is backed by knowledgeable staff, ready to help you. Jarraff prides itself on parts availability and next day air service, so downtime is never a problem.

Performance

The Jarraff All-Terrain Tree Trimmer is available in wheeled and track configurations and can safely travel in the most difficult and challenging terrain. This mobility, combined with the Jarraff's cutting capabilities, lets ROW and tree trimming contractors clear and trim faster and more efficiently than ever before. Utilizing a Jarraff in combination with traditional tree trimming methods can improve productivity by as much as five times over traditional methods alone, depending on conditions and location. This makes the Jarraff a solid business investment.

A **History** of Innovation

Jarraff All-Terrain Tree Trimmers have been operating in some of the harshest, toughest to reach areas imaginable for over 25 years. With innovative features that increase production and improve operator protection, the Jarraff All-Terrain Tree Trimmer is the most effective machine for the most difficult of jobs.

In either wheeled or track configurations, the Jarraff is self-contained and requires virtually no set up time. This allows smaller crews to do more, in less time. And since workers never leave the ground, the Jarraff adds safety to every project. For right-of-way maintenance and tree trimming operations, nothing compares to the power and performance of the Jarraff All-Terrain Tree Trimmer.

The Original Jarraff - Quality Above All!

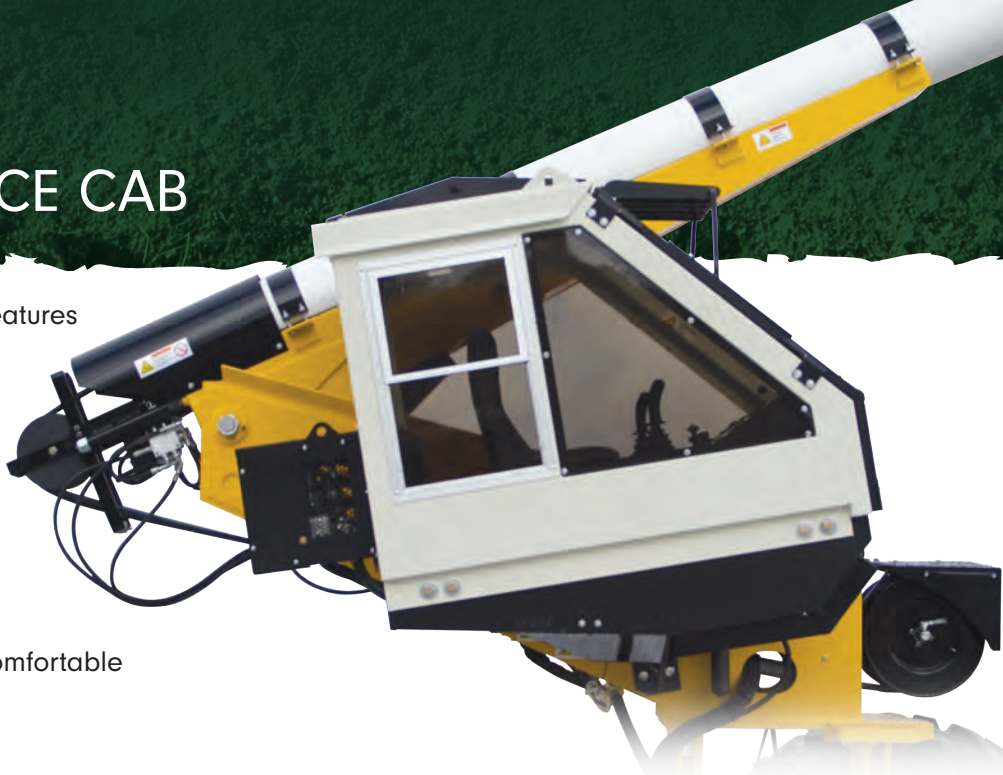

Since 1978, it's been all about quality. Quality parts and quality construction go into every Jarraff All-Terrain Tree Trimmer made. The Jarraff is field-proven in even the toughest conditions and is easily the most advanced, well-constructed tree trimmer on the market today. Now available in 3 models, it's easy to see that there's a Jarraff that's right for any project. Don't settle for less. There's only one, the original Jarraff All-Terrain Tree Trimmer!

HISTORY

HIGH PERFORMANCE CAB

The cab on the Jarraff All-Terrain Trimmer features superior engineering and industry exclusive features that help improve operator safety and productivity.

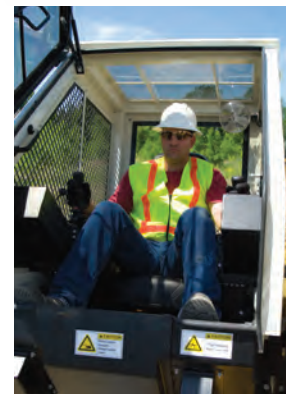

While the cab offers a dynamic operational range, it is also ergonomically designed to provide the user optimal comfort and control. The cab is specially designed to reduce noise and vibration providing the operator a safer and more comfortable working environment.

Safety & Certifications

After extensive testing, the cab of the Jarraff has now received ROPS, FOPS, OPS (not shown) and operator restraint certifications per all ISO and SAE standards. An industry first for self-contained all-terrain tree trimmers!

The high performance cab is completely enclosed, protecting the operator from the elements. Full panel, tinted lexan windows prevent distortion and provide a clear view of operations. And a rear pop-out window adds another level of operator safety and protection.
